October – December 2009

Issued 28 September 2009

Meteorological Department

General Condition

Upper Thailand. High pressure areas from China will occasionally extend its ridge to cover upper Thailand. Abundant slightly rainfall remain in upper Thailand with cool and cold weather especially in December. Cold to very cold with dense fog and frost are expected over mountainous areas and mountain tops especially in northern and northeastern Thailand.

Southern part. Low pressure trough will lie across southern Thailand and northeast monsoon will prevail over the Gulf of Thailand and southern part, bringing further heavy rainfall. However, rainfall amounts are likely below average in several areas.

Warning : - In October and November, there is high probability that the tropical cyclones in the Western North Pacific Ocean or the South China Sea move through eastern and southern parts of Thailand. Therefore, people should beware of natural disaster and follow the weather news.

- In December, Westerly trough may move from Myanmar through upper Thailand, causing thundershowers and gust in some areas. The active low pressure cell in the lower Gulf of Thailand or the lower South China Sea may be active to the tropical cyclones and move through southern Thailand, causing abundant rainfall in those areas with storm surge over the coastal areas of southern Thailand, people and navigators should follow the weather forecast for further information.
